

Job Title: AI Engineer Intern

Company: CodeAtRandom AI

Location: Remote / Hybrid (India)

Duration: 6 months (extendable / convertible to full-time)

Start Date: Immediate to 1st January, 2026

Internet Requirement: You must have good & stable Wi-Fi connection [minimum 40Mbps]

About CodeAtRandom AI

CodeAtRandom AI is an early-stage startup building an **AI-driven Career Companion** — a lifelong mentor that adapts with learners from school to job.

Our platform blends **AI + community + personalized learning analytics** to help users grow smarter, faster, and more efficiently.

We are building the intelligence layer that powers this — and we are looking for someone excited about **building real-world AI systems**, not just running notebooks.

Role Overview

As an **AI Engineer Intern**, you will work closely with the founder and development team to design, train, and deploy the **AI models** behind our product.

You will handle everything from **data collection** → **model experimentation** → **API deployment** — in a fast-moving, startup-style environment.

Key Responsibilities

- Develop and fine-tune **ML/NLP models** for:
 - Personalized learning recommendations
 - Career & skill path prediction
 - Resume/job matching
 - Sentiment analysis of community discussions
- Work on **data preprocessing, cleaning, and labeling pipelines**
- Implement **vector databases** (e.g., Pinecone, ChromaDB, Weaviate) for embeddings
- Integrate **LLM APIs** (OpenAI, Anthropic, Gemini, Hugging Face) into backend services
- Experiment with **RAG (Retrieval-Augmented Generation)** and context retrieval systems
- Build and expose model endpoints as **REST APIs** or via **FastAPI/Flask**
- Collaborate with the full-stack developer to integrate AI into the web frontend
- Track model performance, accuracy, and improvement over time
- Maintain experiments and results documentation on Notion/ClickUp

Required Technical Skills

Core Machine Learning & NLP

- Python (NumPy, pandas, scikit-learn)
- NLP libraries: **Hugging Face Transformers, spaCy, NLTK**
- Vector embeddings: **Sentence Transformers, OpenAI Embeddings**
- Model evaluation & fine-tuning (classification, recommendation, similarity)

AI Systems & Deployment

- Building APIs with **FastAPI / Flask**
- Familiar with **Docker** and containerization
- Knowledge of **Git / GitHub workflows**
- Understanding of **cloud deployment (Azure / AWS / GCP / Vercel)**

LLM Integration & Prompt Engineering

- Experience using **OpenAI API, Gemini, Claude, or similar LLMs**
- Prompt design and evaluation for dynamic user interactions
- Understanding of **RAG systems, embeddings, and context retrieval**

Data & Storage

- Familiarity with **SQL / NoSQL databases**
- Knowledge of **Vector DBs (Chroma, Pinecone, Weaviate)**
- Basic understanding of **data pipelines** and preprocessing tools

Good to Have

- Experience with **LangChain / LlamaIndex / Haystack**
- Understanding of **recommendation systems**
- Exposure to **knowledge graph / semantic search** concepts
- Basic experience in **AI evaluation metrics and MLOps fundamentals**
- Familiarity with **Azure Cognitive Services** or **OpenAI on Azure**

Tools You will Work With

-  Hugging Face, OpenAI API, LangChain
-  FastAPI, Flask, ChromaDB
-  Python, scikit-learn, PyTorch, pandas
-  Azure / Google Colab / AVD environment
